

Cargo Status

The **cargo status** allows you to follow the progress of the order. The following Cargo statuses are distinguished:

1. **Confirmed** – There is an agreement with the client and the carrier that the cargo will be shipped;
2. **Problems** – There are some problems in the cargo delivery process;
3. **Loaded** – Cargo is on its way;
4. **Delivered** – this status can be entered manually but it will be set automatically when the actual date of the last delivery is passed;
5. **Paid** – An invoice has been issued and paid;
6. **Canceled** – The order has been cancelled.

The image shows a screenshot of a software window titled "Client order - 123456789". The window has several tabs at the top: "Cargo", "Sent e-mails", "Attachment(s)", "Prepared CMR", "Sell cargo", and "Status history". The "Cargo" tab is active. Below the tabs, there are various input fields and buttons. A dropdown menu labeled "Status" is highlighted with a red rectangle, and it shows "Delivered" as the selected status. Other visible fields include "Order No.", "Order date", "Order type", "Cargo manager", "Client order No.", and "Contact info".

Information about the cargo status changes both manually and automatically depending on the settings in OZOLS TMS chosen by your company.

1. Automatically:

- Based on the car's location (by loading data from the car's GPS navigation system). More info [here](#).
- Based on loading/delivery dates (Ozols or iOzols) entered by the manager.

2. Manually:

- The status can be set in the **Client order** window by clicking. 
- Through the driver's application ([MyOzols](#)), which can be used by both the driver and the manager of the carrier. More info [here](#)
