

# Search window

## How the search window works:

- If you search for, for example, "**EKG**" the program will select all records where the field **name starts with "EKG"**
- If you search " **% EKG**" the program will select all records where **the field record contains "EKG"**
- If you search for " **! "EKG"** program will select all records where the field name **does not start with "EKG"**
- If there are spelling differences, the **unknown letter** is replaced by an underscore " **\_**". For example, you can search for the word "Vilnius" as "Viln\_**\_**s"
- Square brackets [ ] are used to search for multiple **possible letters** . For example, searching for " [ **CS** ] heryl" will find the result for both Cheryl and Sheryl

## Two search windows:

1. The data is searched in the **OZOLS database**;
2. Data is searched only in **the open table**.

No.	Date	Client	Loading address	Delivery address	Cargo manager
K10130	29.06.2021	EKG Cargo	LT-7869, Kaunas	LV-1001, Riga	Demo
K10128	28.06.2021	EKG Cargo	LT-7869, Kaunas	S-121 49, Johanneshov	Demo
K10129	28.06.2021	EKG Cargo	LT-7869, Kaunas	S-121 49, Johanneshov	Demo
K10117	05.03.2021	EKG Cargo	LT-7869, Kaunas	S-121 49, Johanneshov	Demo
K1007/2	05.06.2020	EKG Cargo	LT-7869, Kaunas	LV-1005, Riga	Demo
K1007/3	05.06.2020	EKG Cargo	LT-7869, Kaunas	LV-1001, Riga	Demo

Revision #3
