

# Type of transport

You can specify the **type of transport in client's order**. It can be added or edited.

**OZOLS > Freight forwarding > Lists > Transport types**

The screenshot shows the OZOLS software interface. The top toolbar contains buttons: Browser, Back, Forward, **New** (2), Confirm, Filter, **Delete**, Columns, Functions, Relate, Print, Mail, and Mu. The left sidebar shows a tree view with 'Vehicle types' (1) selected under 'Lists'. The main area displays a table of transport types:

Name	Truck	notes
Auto		
Konteineri	x	
Mega	x	
Platforma	x	
REF	x	fafafs
TENT	x	wde

The 'New - Vehicle type' dialog box (3) is open, showing the 'Name' field with 'Box trailer' and a 'Piekabe' checkbox. The 'Save' button (4) is highlighted.
